Subject: Invitation to Participate in MOTION Study IRAS: 321809

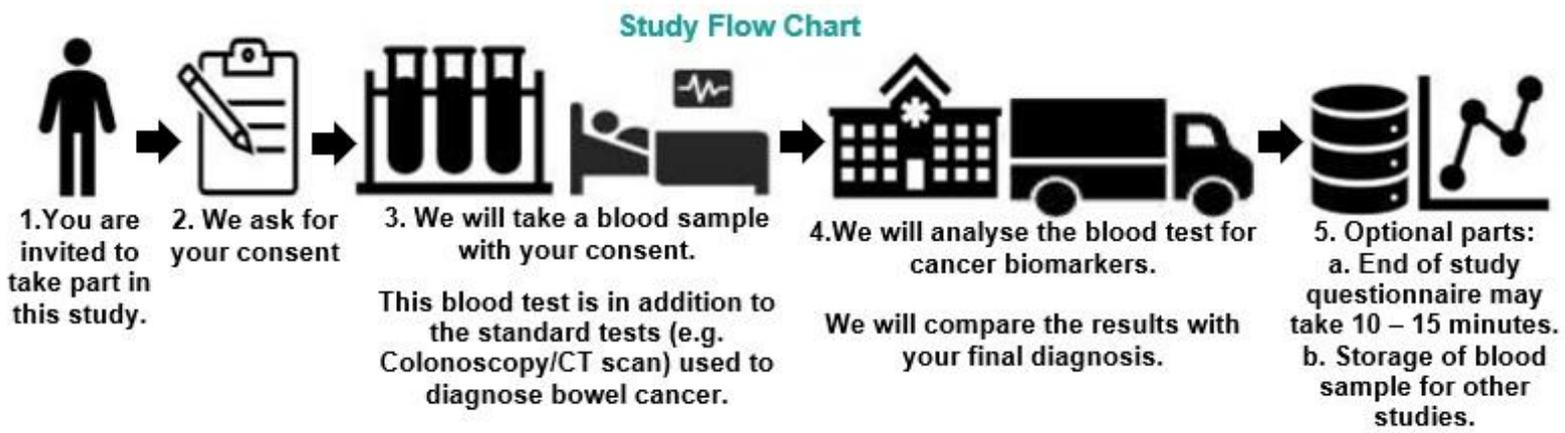

Full title: Plasma biomarkers in stratifying patients referred via the lower gastro-intestinal (LGI) suspected cancer two-week wait (2WW) pathway

Dear Patient,

Your GP has referred you to the hospital to investigate your symptoms to rule out bowel cancer. The hospital will arrange to see you in the hospital setting soon. We are reaching out to invite you to participate in a research study as your hospital clinic is part of the study and your doctors think you may be eligible. The main aim of the study is to check if a simple blood test can help doctors identify individuals who may require specialist tests to diagnose bowel cancer more efficiently. We believe that this may help with early detection of bowel cancers.

We have enclosed the Patient Information Sheet for the study with this letter. Please read it carefully and we will be happy to talk to you if you have any unanswered questions. During the clinic appointment, the doctor or nurse who see you will confirm if you have received the invitation letter and will ask you permission for the study team to contact you. One of the study members will aim to call you 72 hours or more after the clinic to answer your questions. However, you do not have to wait for this call. Instead you can also reach out to the study team on the below number or email and we can arrange to speak to you at a time convenient for you.

Your participation is entirely voluntary, and you may withdraw at any time without affecting your ongoing care. All your information will be kept strictly confidential.
